

ProtoREACH

ProtoREACH is a computational (*in silico*) tool specially focused on REACH, a European Union regulation, adopted to improve the protection of human health and the environment from the risks that can be posed by chemicals, while enhancing the competitiveness of the EU chemicals industry.

REACH also promotes alternative methods for the hazard assessment of substances in order to reduce the number of tests on animals. The requirements for registering a chemical substance are organized as annexes of the REACH regulation. Different annexes must be used depending on the substance mass produced or imported by each company.

Endpoint

Environmental fate parameters: Persistence: Biodegradation. Biodegradation time frame (primary, ultimate degradation).

This model refers to the half-life ($T_{1/2}$) in soil which is the time interval that corresponds to a concentration decrease by a factor 2.

Metrics

Training set

Validation set

| Parameters | Training | Validation |
|---------------------------|----------|------------|
| R ² score | 0.97 | 0.77 |
| Mean absolute error (MAE) | 0.08 | 0.23 |
| Mean squared error (MSE) | 0.02 | 0.16 |
| Median absolute error | 0.04 | 0.13 |
| Explained variance | 0.97 | 0.77 |

ProtoREACH is part of

ProtoPRED platform allows the easy, fast and user-friendly prediction of different properties of chemical compounds, using proprietary (Q)SAR models.
